

TUI BLUE LINDOS BAY

EMERGENCY POLICY FOR A CHEMICAL OR WASTE RELATED SPILL

(this policy is applied and installed in all areas related to the storage of chemical and cleaning products)

All chemical and cleaning related products should be stored in inventory rooms where access is permitted only to the individuals who are authorized to use them.

Their replacement should be positioned on shelves with trays as to limit damage that can be done from any potential leaks.

In the event of a spill takes place the adequate protective gear must be utilized from employees to clean out the respective area.

This gear includes goggles, gloves and proper clothing.

All the necessary procedures with respect to the particular chemicals that have spilled must be followed and they may be found on each box or carton that carries that substance.

In addition, all chemicals stored should be marked with specific dates of storage and should all meet professional environmental criteria as with ISO or HACCP restrictions.

MSDS should be readily available upon request.

Items with expired due dates should not be permitted for storage.

In the event a spillage is located by employees the Head of Maintenance should immediately be informed and he along with his team will manage the emergency.
